## Rod Grinder Gauge VSL 12084

- exports on-line measurement data for the automatic controlling of rod grinders
- rod diameter range between 300 and 120 mm, this grinder control achieves measurement tolerance h6.
- suitable for all kinds of rod grinders, especially if the required accuracy cannot be achieved by laser measurement due to variations in surface roughness and due to variation effects of the emulsion film
- two such gauges in the Fundia Steel works in Sweden have been in operation for two daily shifts for 5 years - without any fault. Their diamond measurement edges were replaced for the first time after three years of operation
- many more types of rod grinder gauges and grinder control systems available
