Thickness and Width Gauge for Strip and Profile

- extraordinary sturdy design for use on mills or inspection lines, gauge is well able to measure even very wavy strip
- strip thickness for above application is 19 mm, width is between 6 and 38 mm
- one set of two measurement pins each for thickness and width, position of the measurement pins detected by optical step encoders
- measurement accuracy about 0.01 mm at a measurement stroke of 25 mm; gauge can measure any size up to 25 mm without presetting; larger thickness or width can be measured after the gauge was calibrated on a slip gauge
- measurement data indicated on PC monitor; two PC interfaces, one each for thickness and width; Vollmer software for data visualization and evaluation
